

Do you have Rheumatoid Arthritis?

The SEAM RA research study is evaluating whether Enbrel® (etanercept) alone or methotrexate alone may be as effective as taking both medications together for maintaining remission in rheumatoid arthritis (RA).

[If you are on etanercept and methotrexate and your symptoms are well-controlled, you may be eligible to take part.]

If you qualify for this study:

- You will receive study-related investigational medication (etanercept and/or methotrexate) at no charge
- You may be reimbursed for parking and travel
- You will receive all study-related medical exams at no charge by a rheumatologist
