

# spirit P2

*a psoriatic arthritis  
clinical study*

Painful or swollen joints?  
Itchy, scaly skin?

You could be eligible for a clinical  
research study in psoriatic arthritis

The Spirit P2 Study is looking at the effectiveness and safety of an investigational drug in people with active psoriatic arthritis (PsA). This study may help us to better understand potential treatments for this often painful condition.

We are looking for people who:

- are 18 years of age or older
- have had active PsA for at least 6 months
- are not pregnant, breastfeeding, or planning to become pregnant (you or your partner) during the study
- have had previous treatment for PsA with at least one biologic medication (which was discontinued).

Throughout the study, which could potentially last for up to 3 years, participants will receive care from a dedicated team of experienced medical staff. All study drugs and procedures are provided at no cost.

If you would like to receive more information about this study, please contact:
